

EQUINE TOMOSYNTHESIS

Fetlock (C0009, 16 Apr 2019)

On the DTS images of the fetlock in LM, PD and DLPMO projections, periosteal reaction with the formation of an enthesophyte on the lateroplantar part of the first phalanx in the area of attachment of the distal sesamoid ligament is observed. Also, there is calcification distal to the lateral proximal sesamoid bone present.

Diagnosis: Enthesopathy, mineralization of the distal sesamoid ligament.
